## About Me

### Brief Information

I am a multi-talented Architect with 8 years' experience in the architectural field. During this time I have worked on a wide range of projects both in Norway and internationally, in a diverse array of sectors including: residential, commercial, education, religious, industrial, leisure, and cultural buildings. The wide variety of challenges this experience has presented means that I have developed a strong ability to critically analyze situations, and adapt to their varying demands.

I am a graduate and looking for a position to gain some valuable experience in academia. My work is focused on aesthetic, innovative methods, and phenomenology with emphases on technology, methods of representation. I have a very strong passion in Computational Design and related to sustainability, aesthetic, energy, building design, simulation, architecture and the environment. My extensive background in several design fields has given me a strong set of transferable skills and the ability to adapt and learn quickly. I am a hard worker man that able to work 24/7 without any problem because I love my job and I look to improve my carrier day after day. In last few years, I worked very hard to improve my knowledge, skills and personality and will continue until gets my dreams and bring the happiness to the people that help and support me through my life, my lovely parents, spellings, friends, and teachers.

Thanks.

## Education
